

MindBridge - Bridging the gap between what you feel and say

Introduction

Mental well being is an important part of a person's quality of life. However, many people experience many difficulties like stress, loneliness, emotional pressure and other personal problems without being able to express their feeling effectively. Everyone have their own way of expressing their feeling, some might be comfortable in expressing to other and some might find this difficult. Mindbridge is a mobile application designed to provide the user a private space to express their inner feelings, thoughts and allows them share only the information they want to share with their therapists. This app focuses on creating a safe space for the user allowing them to express their inner thoughts, feelings and emotions without the fear of judgement.

Problem Statement

Everyone have their own story and problems they are dealing but doesn't share with others. They might not show it but goes through loneliness, emotional pressure and personal difficulties. Some may fear being judged, misunderstood or simply may not know how to put their thoughts to themselves and have no comfortable space to express what they are going through.

Although there are various mental well being applications available, many focus on specific activities such as professional therapy, meditation or mood tracking. There is a need for a simple and private platform that mainly aims on the comfort of the user, allowing the user to express their thoughts without any pressure and fear of being judged.

Therefore, MindBridge aims to provide a safe and supportive environment where users can freely express and organize their inner thoughts while maintaining control over their personal information. If a user chooses to seek additional support from a therapist or other professional, the application allows them to decide which information to share, ensuring that only the thoughts, journal entries, mood information, or concerns they are comfortable sharing are made available to the professional.

Objective

The main objective of Mindbridge is to provide a safe space for the user where they are free to express their thoughts, their inner feelings and reflect on them.

The specific objectives are:

- To create a safe place and a private space for the users to express their inner thoughts and emotion.
- To help users express their feelings through journaling, mood tracking and guided questions.
- To help user organize and understand their feeling more clearly.
- To provide AI assisted support to organize and encourage self-reflection.
- To allow the user to share the selected thoughts, journal entries and other relevant information to their therapists.
- To maintain user privacy and give user control over their personal information.
- To provide appropriate support and safety options when user need additional help.
- To develop a simple and user-friendly mobile application using flutter.

Conclusion

Mindbridge aims to provide a safe, private and comfortable space where the users can freely express their thoughts, feelings and emotions. By providing features such as private journaling, mood tracking, guided questions and secure conversation with the therapists, the application can help users express themselves more comfortably and communicate their concerns more effectively. Overall, Mindbridge aims on creating supportive environment that combines personal expression with professional support while maintaining the privacy and control.
