

MindBridge:

Targeted audience:

→MindBridge primarily targets students and young adults who experience emotional stress or difficulty expressing their thoughts and want a private space to reflect, organize their feelings, and connect with professional support when needed.

Actors:

Mainly there will be three actors:

-User

-Therapists

-Admin

Age Group:

Students and young adults aged approximately 18–24 who may experience stress, emotional pressure, difficulty expressing their thoughts, or uncertainty about seeking professional support.

Age Group	User type	How they use Mindbridge
16-18	Older teenagers / students	Private journaling, mood tracking, guided reflection
18-24	Primary target	Stress, studies, relationships, self-expression, therapy preparation and therapist communication
25-30	Secondary target	Self-reflection, emotional organization and professional support
30+	Possible users	Journaling and therapist communication, but not the main target

Scenario:

MindBridge User Scenario

User Profile

- Name: Aayush
- Age: 21
- Occupation: University Student
- User Type: Primary User

Background

- Aayush is a university student dealing with academic pressure, assignments and personal responsibilities.
- He often feels stressed and overwhelmed.
- He finds it difficult to explain his feelings to friends, family or a therapist.
- He wants professional support but does not know how to start the conversation.

User Scenario

1. Aayush opens the MindBridge app when he is feeling overwhelmed.
2. The Home screen asks: "How are you feeling today?"
3. He selects his current emotion and adds a short note.
4. He opens the Private Journal and writes freely about what is bothering him.
5. His journal entry is saved as "Private by default."
6. After writing, he chooses "Reflect with AI."
7. AI organizes his thoughts into clearer sections and identifies general themes.
8. AI provides a few questions to help him reflect.
9. Aayush reviews and edits the AI-generated result.
10. He decides that he wants to talk to a professional therapist.
11. He opens the Therapist section and searches for a suitable therapist.
12. He views therapist profiles, specializations and availability.
13. He chooses a therapist and starts a conversation.
14. Before sharing anything, MindBridge shows: "You choose what to share."

15. Aayush selects specific journal entries and mood information.
16. He reviews and edits the information before sharing it.
17. Only the information he selected is sent to the therapist.
18. Aayush communicates with the therapist through secure chat.
19. He books an appointment through the app.
20. The therapist can use the information Aayush intentionally shared to better understand what he wants to discuss.

Outcome

- Aayush can express his thoughts privately.
- He can organize and understand his thoughts more clearly.
- He decides what information to share.
- He can communicate with a therapist more comfortably.
- His private information remains under his control.

Main User Journey:

Express → Reflect → Organize → Choose → Share → Communicate
