DEPARTMENT OF COMPUTER SCIENCE AND TECHNOLOGY
MAD LOG REPORT

WEEKLY PROGRESS REPORT FORM

Student's Name: Alina Gurung		Roll No. : 2510412250	
Week No: 1		Subject: MAD	
Summary of progress		Selected and refined the MindBridge project idea. Identified the main problem, target users, and objectives of the application. Conducted Software Market Research (SMR) on existing applications such as Glimr, Ponderwell, and Mirror. Compared existing features and identified the gap in helping users organize their thoughts before communicating with a therapist. Brainstormed and finalized the main features and application workflow. Defined the initial MVP scope and considered the suitable technology stack for development.	
Challenges:		Difficulty in selecting and narrowing down the project idea. Finding a clear problem that MindBridge could address. Researching and comparing similar existing applications. Identifying a meaningful gap between existing applications and MindBridge. Deciding which features should be included in the MVP. Keeping the project scope realistic within the available development time. Understanding which technologies would be suitable for developing the application.	

Remarks/Feedbacks:	The project idea was successfully identified and refined. Initial market research and competitor analysis were completed. The main objectives, target users, and core features of MindBridge were defined. The project scope was narrowed down to make it achievable within the given timeframe. Further technical planning and development will be carried out in the upcoming weeks.
